OBJECTIVE

Computer Science undergraduate with strong problem-solving skills and hands-on experience in software engineering, automation, and AI-powered applications. Seeking a software engineering role to build scalable and reliable software solutions while continuously learning and growing as an engineer.

EDUCATION

Bachelor of Technology in Computer Science and Engineering *2023 - 2027 (Expected)*
GITAM (Deemed to be University), Visakhapatnam *CGPA: 9.12*

SKILLS

Languages	Python, C, HTML, CSS, JavaScript
Web & Databases	React.js, Node.js, MySQL, Firebase, REST APIs, JSON
Microsoft & Tools	SharePoint, Power Automate, Power BI, Azure DevOps, Git, GitHub, Jira
Core Competencies	Problem Solving, Ownership, Leadership, Teamwork, Communication

EXPERIENCE

Software Engineering Intern ***May 2026 - July 2026***
Volvo Group India Pvt. Ltd. *On-site, Bangalore*

- Developed internal solutions on Volvo's SharePoint intranet, building Power Apps integrated with SharePoint and Power Automate workflows to streamline business processes; created dashboards for RPA error analysis using UiPath Orchestrator logs and REST APIs.
- Developed an AI-powered Scrum Master using Azure DevOps APIs and Volvo GenAI Hub, automating backlog generation, sprint analysis, retrospective summaries, agile board creation, and project-specific RAG-based knowledge retrieval.

Data & Insights Associate ***May 2025 - June 2026***
Directorate of External Relations, GITAM *On-site, Visakhapatnam*

- Engineered and maintained a centralized alumni database by consolidating fragmented records using LinkedIn Sales Navigator, SQL, and Excel, enabling institution-wide analytics and streamlined cross-functioning.
- Served as Product Owner for the alumni management platform by defining requirements, validating features, and collaborating with developers. Introduced Jira and Kanban-based workflows, improving team productivity by approximately 40%.

PROJECTS

Driver Drowsiness Detection System

- Built an affordable IoT-enabled driver assistance system using Python, OpenCV, Dlib, Arduino Uno, and Twilio APIs to classify driver states through real-time facial landmark detection and automate safety responses.
- Integrated MQ-3 alcohol sensing, ultrasonic collision detection, relay-controlled vehicle actuation, and cloud-based emergency messaging to create a real-time hardware-software prototype.

LEADERSHIP & RESPONSIBILITY

- **President, Meta Developer Communities - GITAM Visakhapatnam**
  Led the development of applications for club management and student engagement while mentoring developers and organizing technical workshops, hackathons, and community events.
- **Outreach & Communications Chair, Homecoming 2025 - GITAM Visakhapatnam**
  Led a team of 20 members to reconnect with over 10,000 alumni globally while coordinating outreach campaigns and alumni data management.
